2. INTRODUCTION

2.1 Purpose

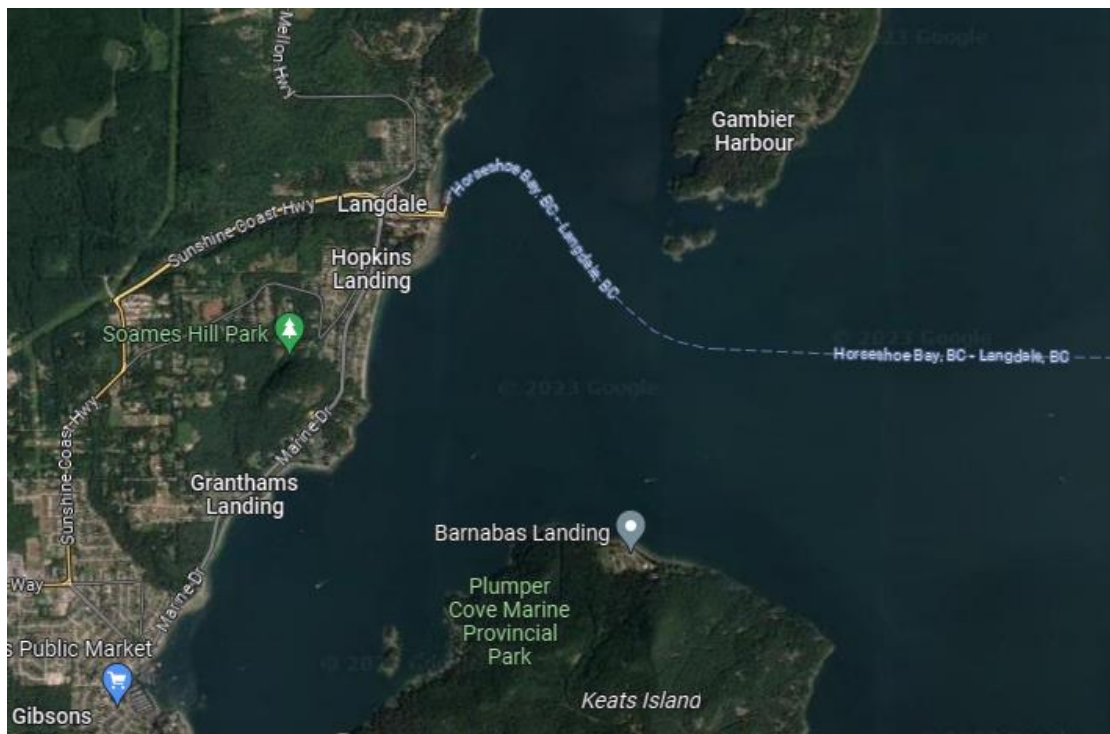

The Regional District is seeking proposals from qualified Engineering Consultants to complete design, specifications, permitting, tendering services, contract administration, construction management services, and post-construction closeout for the major structural repairs and upgrades to the Hopkins Landing Port facility.

3. SITUATION/OVERVIEW

3.1 Background

Hopkins landing was first built in 1908 and was designed to receive the Union Steamship vessels of the day. At a later date there were 4 steel supply pipes installed by Imperial Esso that ran alongside the approach to a tank farm located above Marine Drive. Around 1972, a rebuild took place on the facility and remains the structure currently in place, creating a narrower configuration on the approach and keeping the significant wharfhead, which was capable of receiving the Imperial Skeena oil tanker. Fuel delivery stopped roughly 20 years ago, but the facility remained as is for the continued use of the community of Hopkins Landing and the inhabitants of Gambier Island, Keats Island, and for the boating needs of West Howe Sound.

Hopkins Landing Port is located just south of the Langdale Ferry Terminal. It can be accessed by sea as well via land off Marine Drive. The mooring float has been removed from site and is in storage off Port Mellon Highway, just north of Williamsons Landing.

In December of 2022 the facility underwent a structural condition assessment, which included detailed above water visual / tactile assessment of the main components, load rating and capacity calculations, health and safety regulations, and a gap analysis to the area's best management practices.

The assessment found the facility to be no longer in serviceable condition. Results indicate that major upgrades are required, and that it is currently considered structurally unreliable for public assembly. The repairs are focused mainly on bearing piles, footings, cross bracing, guardrails, and the float with its anchor piles. There are also 3 large mooring dolphins that no longer serve purpose and are considered for full removal.

The Regional District is not limiting design solutions, facility footprint/layout, or components set for upgrading or downgrading. Proponents are encouraged to explore alternative design and replacement options that remain within best practices, regulations, standards, and meets the Regional District and public use of the facility. Also strongly encouraged is for the proponent to weigh the cost benefit analysis of rebuilding a large portion vs. all of the structure. Having the ability to align it better with the current environmental impacts, public uses, service levels, life expectancy, and the overall safety of the facility. Proponents are asked to submit no more than 3 design options for the construction of the facility, each design option will be evaluated as a separate proposal.

3.2 Project Objectives

3.3 Scope

The scope of the project is to design and repair the Hopkins Landing facility.

1. Review provided inspection reports and documents from the Regional District. (Appendix A-F).
2. Meet with the Regional District for further design considerations, limitations, and service level requirements that are not captured within the attached inspection reports.
 - a. Example - Drainage: The new asphalt surface of Hopkins Road has been causing gravel material to wash down the north side of the road during rain events and accumulate at the entrance of the approach.
3. Submit conceptual design (50%) including a class C cost estimate, life expectancies, and proposed project schedule.
4. Review period with the Regional District and stake holders.
5. Advance the design for final review (95%). To include but not limited to, specifications, construction management plan, environmental control plan, waste/disposal plan, material salvage plan, traffic control plan, emergency/safety plan, final costing, and schedule. Ensuring the design and construction methods conforms to all applicable codes, guidelines, regulations, and all laws as required by the authorities having jurisdiction.
6. Initiate and obtain all required First Nation project requirements and approvals.
7. Secure all permits and approvals, including but not limited to: Fisheries and Oceans Canada (DFO), Ministry of Environment (MOE).
8. Final review period with the Regional District.

9. Submit IFC drawings in electronic format pdf. and AutoCAD/Civil 3D. Drawings and relevant documents shall be signed and sealed by a Professional Engineer in good standing with Engineers and Geoscientists British Columbia (EGBC).
10. Regional District will bring project to tender with Engineer as technical and administration support.
11. Construction and contract administration during the remaining duration of the project. Including but not limited to hosting biweekly progress meetings, onsite inspections, environmental and First Nation permitting/investigation support, coordination and record keeping on required material/structural testing, and progress reports.
12. Project close out including but not limited to preparation and certification of record drawings in electronic format pdf. And AutoCAD or Civil 3D.
